TSW800TP
Triple Play Technology

The TSW800TP is a modular test set used for installation and maintenance of Triple Play services. Combining ADSL, voice and video testing capabilities on a single device, the TSW800TP optimizes the task of measuring access and service parameters contracted by your customers. The TSW800TP is the ideal choice to test a service on your network - be it voice, data or video.

FUNCTIONALITIES

- ADSL/ADSL2 + Testing
  - Error counters
  - Histograms
  - Ping testing
  - PC-like browsing
  - Exclusive Tools: Modem Config and Upload
  - Line parameters measurement: attenuation, signal-to-noise ratio (SNR), power, etc.

- IPTV Testing
  - Supported Transport Protocols: MPEG-2 Broadcast (UDP and RTP), MPEG-2 VOD (RTSP-UDP and RTSP-RTP)
  - Results: received bytes and TS packets, video stream rate and QoS, errors, jitter, PID Map

TSW800TP → Voice / Data / Video → Triple Play

FEATURES

- Triple Play services test set
- It's a data analyzer (ADSL/ADSL2 +)
- It's a video analyzer (IPTV)
- It's a voice analyzer (VoIP)
- Optional software modules: cost-efficient
- Rechargeable batteries
- Memory / printing
- Free firmware updates available over internet
- Interfaces: Line, Ethernet

Perform tests onseveral points of the access network

DSLAM — Cross-Box — Aerial Cables — Cross-Box — Phone Line — Modem — STB — PC — Telephone — TV

Test points

CENTRAL OFFICE — EXTERNAL NETWORK — INTERNAL NETWORK
